

# MOODLE IS UPGRADING

This guide introduces some of the key changes

## Collapse the Left Hand Navigation

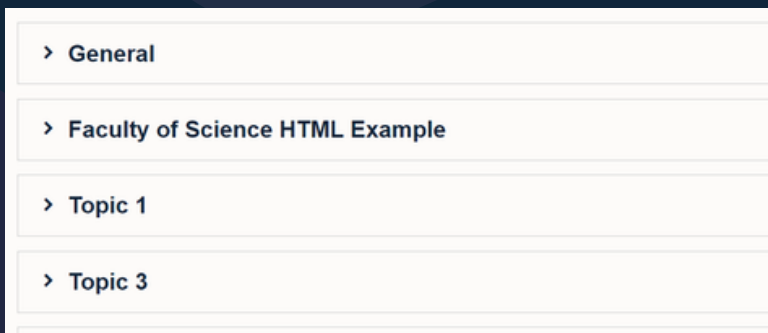

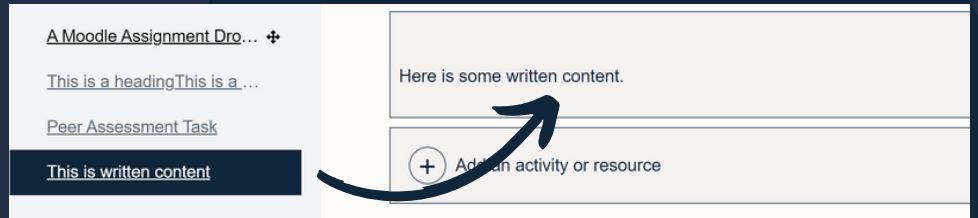

The new left hand navigation bar on the left of your Moodle page can now be collapsed using the 'Collapse All' button at the top of the menu.

## Return to where you were

When you go to a sub-page and hit the back button on your browser, Moodle now remembers where you were and takes you back to that spot on the page.

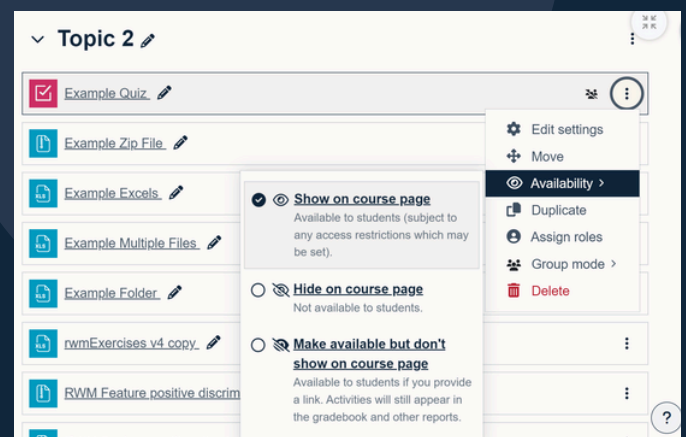

## Labels have titles and appear on the menu

Labels now have the option of adding titles and will appear on the new left hand navigation menu.

## Clearer Topics

We have listened to your feedback and added some clearer definition of topics on your Moodle site so that it is easier to see where you are and where one topic ends and the next begins.

## Set availability from the Item

You can now set the availability and visibility of your content from the menu on the item. Completion tracking is also more visible on Moodle 4.3.

Find out more about the Moodle upgrade and the wider Learning Technology section on our blog.

## Moodle Upgrade July 2024

The Moodle Upgrade to version 4.3 will take place in July 2024. Keep an eye out for further communications around the date and time of the upgrade as they're announced.
